

=====

Notes about installing PyQt4

=====

1. The examples shown when launching PyQt4 scripts from a command line expect the standard PyQt4 installation in your normal python path. Please refer to the [LINKS](#) document for download locations. This is separate from Maya.
2. The examples show when running pyqt script from within Maya's Script Editor expect a version of PyQt4 installed into either Maya's own python site-packages or a custom location that you are including in Maya's PYTHONPATH. Please refer to the [LINKS](#) document for information on how to install pre-built Maya installers, or to build your own version of a Maya compatible PyQt4 from source code.
